# Barbershop Appointment System

The goal is to simplify booking and managing of barber appointments and ehances shop effiviency

Docker is used to containerize components for easy deployment and scalable management

CI / CD

code — plan — release — deploy — operate — monitor — test — build

CI/CD automates build and deployment process, boosting speed, efficiency, and reliability in software development
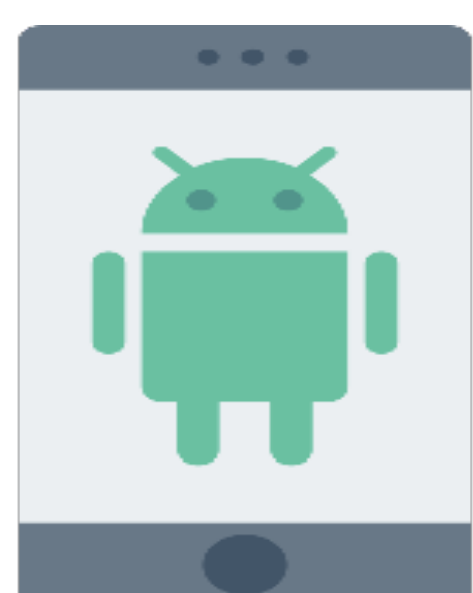

The **React** web app simplifies the booking and management of barber appointments and improves shop efficiency

External STMP

Spring Boot REST API acts as the central interface between the frontend and the database

The **Android** app enables staff to manage their schedules from anywhere

MariaDB

spring
